Action Items	
Item	
Readme content should explain what your site is, and how to setup the development environment	
You should link to your github accounts in the footer	
Add a favicon	
Add a title	
Add Profile for new users has some bugs	

Feedback

Hey guys!

Great Job on Dizney Plus! I have compiled a few issues related to your project.

The issues are all improvements that you should consider making before you add this project to your profile. Having a good quality README is important for giving a good impression to potential employers, same goes for links to your profiles, favicon, and the title. The little things mean a lot here.

You can feel free to make these changes at your leisure, they are for your own benefit.

While the styling overall was good, there are several rough edges, so I docked a few points for that as well, but didn't document them individually.

Overall the high quality of your seed data makes this project look very impressive, and shows that a lot of effort went into that aspect of the project.

Code Smells

https://github.com/COrtaDev/Dizney-Plus/blob/master/routes/profiles.js#L46

This mutually exclusive condition should be an `if ... else`. There's no way this is doing what you think, since `isKid = 'on'` is an assignment that will always return undefined.

https://github.com/COrtaDev/Dizney-Plus/blob/master/routes/profiles.js#L101

The danger of copy and paste -- here's the same bug duplicated.

https://github.com/COrtaDev/Dizney-Plus/blob/master/routes/video-detail.js#L9

This isn't the real `app` variable, that is created in `app.js` and imports this file. As such, this middleware isn't actually registered or doing anything...						
https://github.com/COrtaDev/Dizney-Plus/tree/master/routes						
Be careful to use a consistent naming scheme throughout your project						
https://github.com/COrtaDev/Dizney-Plus/blob/master/views/profiles-edit.pug#L11						
pug doesn't use `#{}` for variables. I wonder if you meant `${}`
